ABSTRACT

This project explores the awareness and usage of AI features in mobile applications among college students, focusing on how these tools influence academic and personal activities. The study aims to evaluate students' familiarity with AI functionalities, identify the most commonly used tools and apps, and examine the perceived benefits and challenges of AI integration. A mixed-method approach was employed, collecting quantitative and qualitative data from 25 participants through structured questionnaires and interviews. The findings reveal that students frequently use AI-powered tools such as editing software, content creation applications, personal assistants, and image generators, primarily through popular platforms like WhatsApp, Instagram, and Snapchat. While these tools enhance productivity, learning efficiency, and convenience, students expressed concerns regarding data privacy, over-reliance, and potential addiction. The study concludes that AI is becoming a vital part of students' digital routines, highlighting the need for increased awareness, responsible usage, and guidance to maximize benefits while minimizing risks.

CHAPTER 1: INTRODUCTION

Artificial Intelligence (AI) has become an essential part of modern life, especially through mobile applications that make daily tasks faster, easier, and more efficient. College students, as active technology users, often interact with AI features such as virtual assistants, personalized recommendations, AI-powered editing tools, and etc. Understanding students' awareness of these features is important, as it enables them to use AI effectively for productivity, convenience, and learning.

This study explores the awareness and usage patterns of AI features among college students. It investigates which apps like WhatsApp, Instagram, Amazon, and AI-specific tools such as Microsoft Copilot students use, how frequently they use these features, and how AI supports their academic and everyday activities.

Furthermore, the study explores students' views on the benefits and challenges of using AI. It addresses concerns such as the reliability of AI-generated content, ethical issues, data privacy, over-reliance on technology. The research aims to provide a clear understanding of how college students use AI in mobile apps and how it affects their lifestyle, learning habits, and preparedness for an AI-driven world.
